IN THE SPECIFICATION:

Please amend the following paragraphs as indicated below:

[0043] Fig. 11 is a flowchart illustrating an exemplary, but not exclusive, process of making a projector that is easily aimed as described herein. First, a housing is provided or formed (step 210). The housing houses circuitry (110, Fig. 1) that is used to generate an image that is to be displayed on a viewing surface. The housing includes a bottom surface. Next, a lens tube is coupled to the housing (step 211). The lens tube includes a lens that is configured to focus the image on the viewing surface. A swivel base is then coupled to the bottom surface of the housing (step 212). The lens may be aimed in any direction in a horizontal plane by swiveling the housing on the swivel base.
